Notes: Estimation sample: 1966Q2–2011Q1.  $\{*, **, ***\}$  = Statistical significance at  $\{10, 5, 1\}$  percent. Newey–West standard errors, 4 lags. CEA is the Credit Easing Accumulated Index, GS is the government saving as a fraction of GDP, CS is the corporate saving as a fraction of GDP. In model IV,  $m$ , CEA and  $\mathbb{E}u$  are instrumented with lags 1 and 2 of  $m$ ,  $\mathbb{E}u$  and the Abiad, Detragiache, and Tressel (2008) Index of Financial Liberalization; the sample for the IV model is 1973Q1–2005Q4. OID p val denotes the p-value from the Hansen’s  $J$  statistic for overidentification.

Notes: Estimation sample: 1966Q2–2011Q1.  $\{*, **, ***\}$  = Statistical significance at  $\{10, 5, 1\}$  percent. Newey–West standard errors, 4 lags. CEA is the Credit Easing Accumulated Index, GS is the government saving as a fraction of GDP, CS is the corporate saving as a fraction of GDP. In model IV,  $m$ , CEA and  $\mathbb{E}u$  are instrumented with lags 1 and 2 of  $m$ ,  $\mathbb{E}u$  and the Abiad, Detragiache, and Tressel (2008) Index of Financial Liberalization; the sample for the IV model is 1973Q1–2005Q4. OID p val denotes the p-value from the Hansen’s  $J$  statistic for overidentification.
